## Add Custom Tracks

clade  genome  assembly

Display your own data as custom annotation tracks in the browser. Data must be formatted in [bigBed](#), [bigBarChart](#), [bigChain](#), [bigGenePred](#), [bigInteract](#), [bigLolly](#), [bigMaf](#), [bigPsl](#), [bigWig](#), [BAM](#), [barChart](#), [VCF](#), [BED](#), [BED detail](#), [bedGraph](#), [broadPeak](#), [CRAM](#), [GFF](#), [GTF](#), [hic](#), [interact](#), [MAF](#), [narrowPeak](#), [Personal Genome SNP](#), [PSL](#), or [WIG](#) formats.

- You can paste just the URL to the file, without a "track" line, for bigBed, bigWig, bigGenePred, CRAM, BAM and VCF.
- To configure the display, set [track](#) and [browser](#) line attributes as described in the [User's Guide](#).  
Examples are [here](#). If you do not have web-accessible data storage available, please see the [Hosting](#) section of the Track Hub Help documentation.

Please note a much more efficient way to load data is to use [Track Hubs](#), which are loaded from the [Track Hubs Portal](#) found in the menu under My Data.

Paste URLs or data: Or upload:  No file chosen

Optional track documentation: Or upload:  No file chosen

Click [here](#) for an HTML document template that may be used for Genome Browser track descriptions.

# How to add your own?

- Try manual input of bed coordinates: chr9:101420560-101435774
  - Need a header with track name=<> description="<>" useScore=1
- Upload a bed file (can be found in <https://github.com/fburdet/UCSC/> ).
- Update track info.

# How to add your own? (2)

- Convert the bed file to bigBed in a terminal, put it on a server and input the link
  - Find the converting softwares on <https://hgdownload.cse.ucsc.edu/admin/exe/>)

- Upload it as a track with the following code:

```
track type=bigBed name="ALDOB bigBed" description="Test bigBed link"
```

```
bigDataUrl=https://github.com/fburdet/UCSC/raw/main/ALDOB.bb
```

# What with bam files?

- Also possible to reference them with a link
- the bai index file needs to be with it
- Can't specify color but there's a "hidden" track settings to change a few things
- Compare 2 samples from  
<https://www.ncbi.nlm.nih.gov/geo/query/acc.cgi?acc=GSE164416>
- Example:

track type=bam name="T2D bam"

bigDataUrl=https://github.com/fburdet/UCSC/raw/main/DP003.T2D.ALDOB.bam

track type=bam name="ND bam"

bigDataUrl=https://github.com/fburdet/UCSC/raw/main/DP010.ND.ALDOB.bam

# wiggle and bigWig

- Wiggle is line-oriented, as

```
variableStep chrom=chrN  
[span=windowSize]  
chromStartA dataValueA  
chromStartB dataValueB  
... etc ... ... etc ...
```

- bigWig is compressed and indexed.
- It's possible to convert directly bam to bigWig, eg with bamCoverage from deepTools.
  - Optional: Specify bin size (default = 50)
  - Optional: specify size factor

```
track type=bigWig name="T2D_bw" description="T2D" color=64,64,0  
bigDataUrl=https://github.com/fburdet/UCSC/raw/main/DP003.T2D.ALDOB.bw
```

```
track type=bigWig name="ND_bw" description="ND" color=64,128,0  
bigDataUrl=https://github.com/fburdet/UCSC/raw/main/DP010.ND.ALDOB.bw
```

# Save and share session

The image shows a screenshot of the UCSC Genome Browser interface. The top navigation bar includes links for Genomes, Genome Browser, Tools, Mirrors, Downloads, My Data, View, Help, and About Us. The 'My Data' menu is open, showing options: Custom Tracks (ct), My Sessions (ss), Track Hubs (th), Track Collection Builder (tc), and Public Sessions (ps). The 'My Sessions' option is highlighted in yellow. Below the navigation bar, there is a search bar with 'chr9:10' and a 'multi-region' button. A chromosome map for chr9 (q31.1) is displayed, with bands for 9p24.1, 9p23, 22.3, 9p21.3, 21.2, and 9p. A scale bar at the bottom shows genomic coordinates from 101,418,000 to 101,427,000. The 'Genome Browser' title and a 'zoom in' button are also visible on the right side.

## Welcome fburdet

### Your Account Information

### Save Settings

Save current settings as named session:

name:   allow this session to be loaded by others

Save current settings to a local file:

file:  file type returned:  plain text  gzip compressed (ignored if output file is blank)

(leave file blank to get output in browser window)

Next step:  
hubs!

# Get bed & bigBed for 1 gene

```
wget https://ftp.ebi.ac.uk/pub/databases/gencode/Gencode_human/release_45/gencode.v45.annotation.gff3.gz
```

```
gzip -d gencode.v45.annotation.gff3.gz
```

```
grep ENST00000647789 gencode.v45.annotation.gff3 | grep exon | cut -f1,4,5 > ALDOB.bed
```

```
./fetchChromSizes hg38 > hg18.chromSize
```

```
sort -k1,1 -k2,2n ALDOB.bed > ALDOB.sorted.bed
```

```
./bedToBigBed ALDOB.sorted.bed hg18.chromSize ALDOB.bb
```

# bam to bigWig

```
samtools view -H DP003.merged.bam > DP003.T2D.ALDOB.sam
```

```
samtools view DP003.merged.bam "chr9:101420000-101437000" >> DP003.T2D.ALDOB.sam
```

```
samtools view -bS DP003.T2D.ALDOB.sam > DP003.T2D.ALDOB.bam
```

```
samtools index DP003.T2D.ALDOB.bam
```

```
bamCoverage -b DP003.T2D.ALDOB.bam -o DP003.T2D.ALDOB.bw
```

# IGV vs UCSC genome browser

## IGV

- Suitable for any genome
- Need to install it on each computer
- Files on local computer can be very big (mammal bam files)
- Not easy to share sessions
- No need for a file server
- Less available annotations

## UCSC

- Genome must exist
- No local install or space needed
- Easy to share sessions with link and sessions
- Need a file server for own tracks
- Tons of pre-loaded annotations
