# **Evolution of gene expression**

---

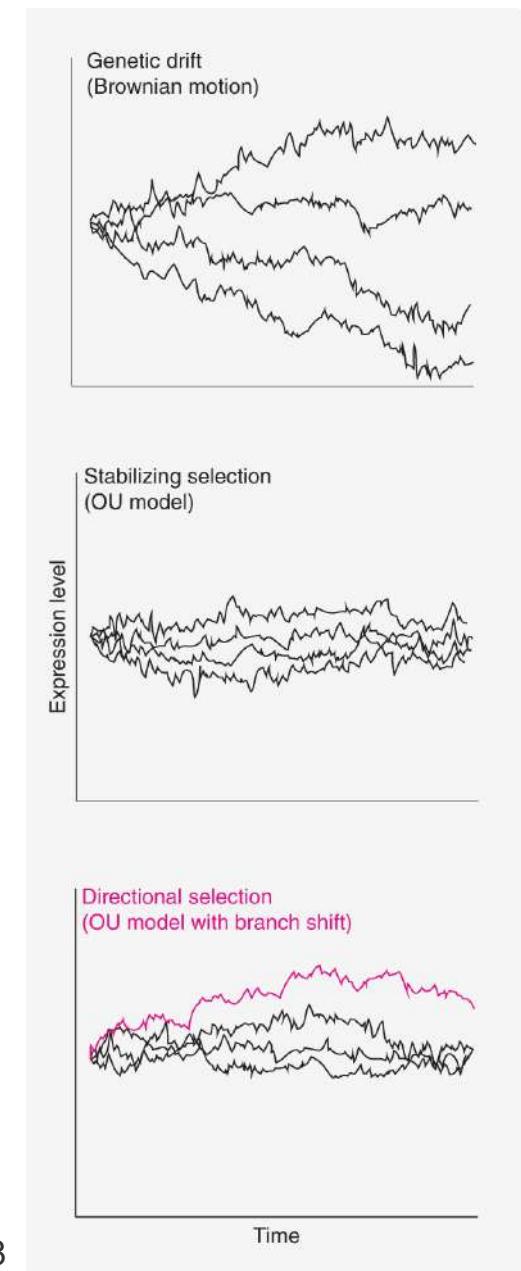

## Discussion

---

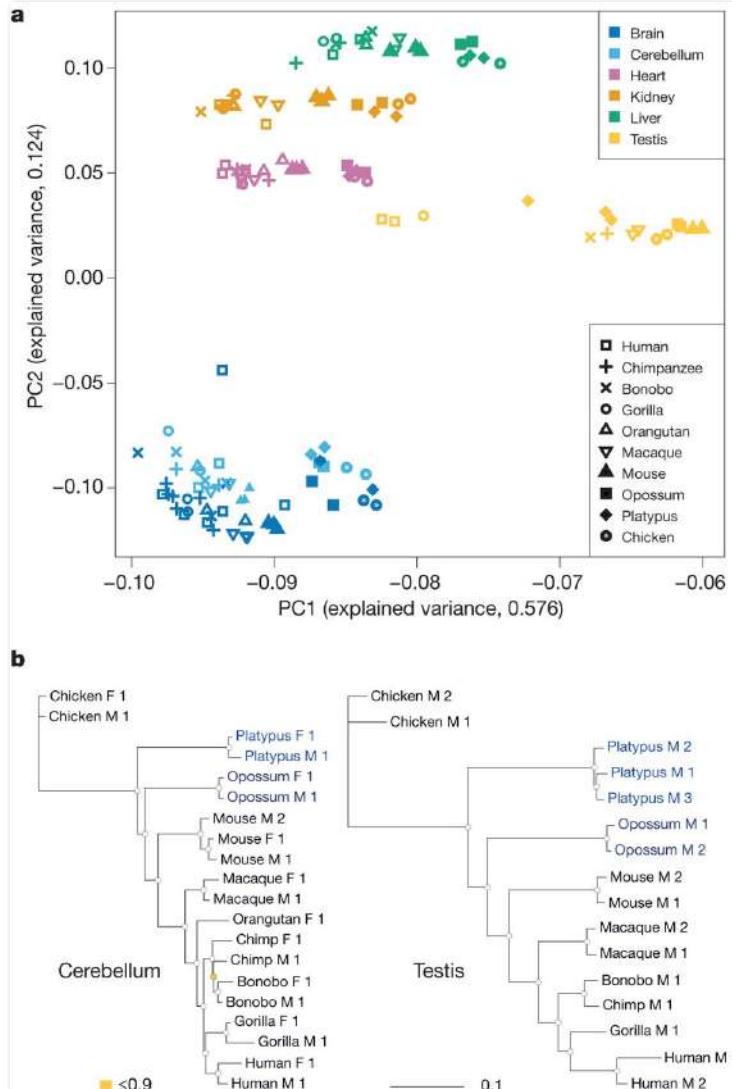

Describe in 2 words what you expect of the evolution of gene expression

# Gene expression is a quantitative trait

- Expression level
- Tissue-specificity
- Ratio of expression between conditions, e.g., male/female

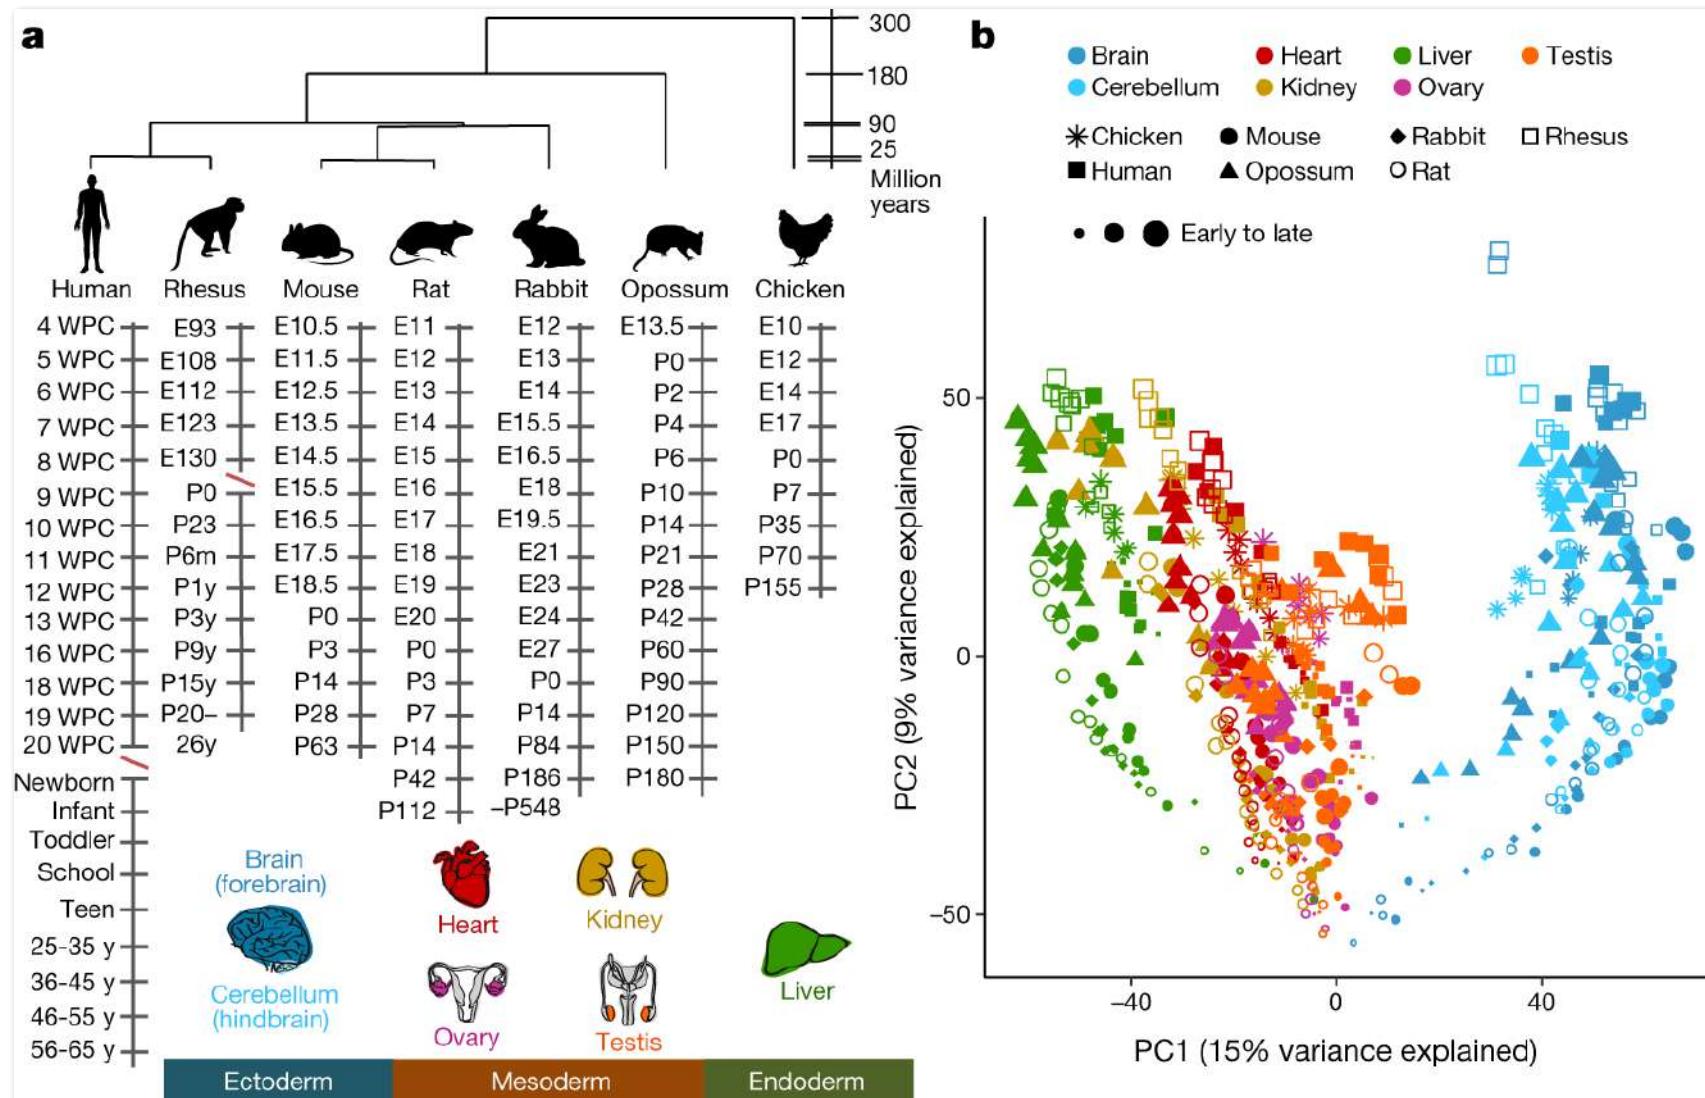

# Evolution of gene expression in mammals

Gene expression clusters by homologous organ,  
not by species

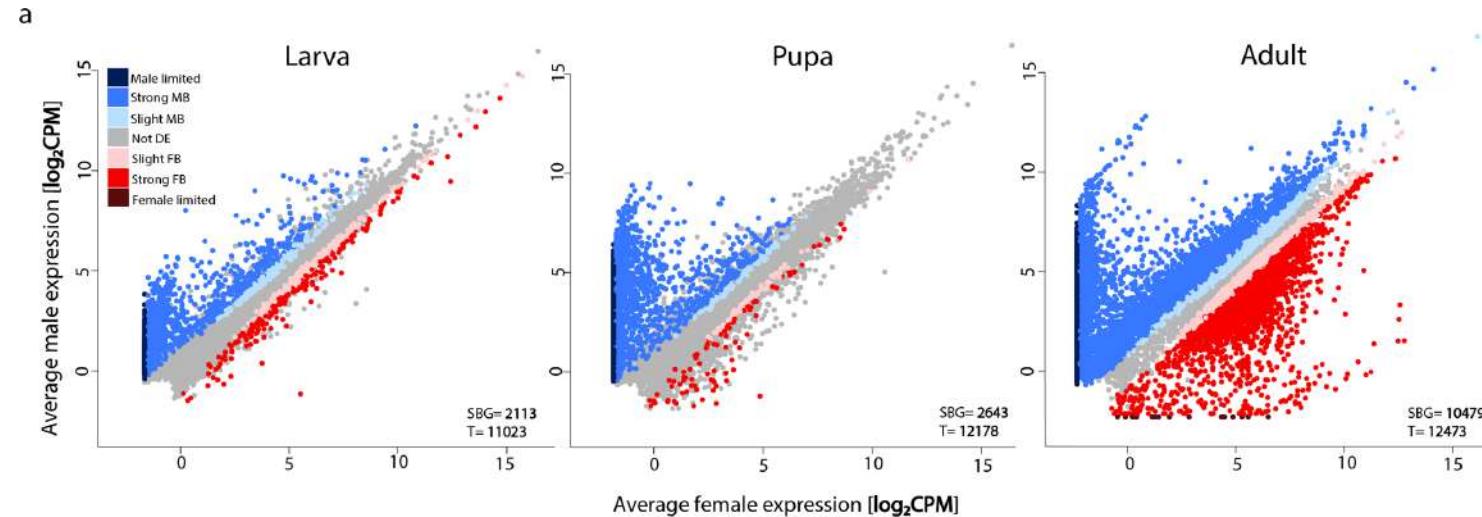

# Evolution of gene expression in mammals

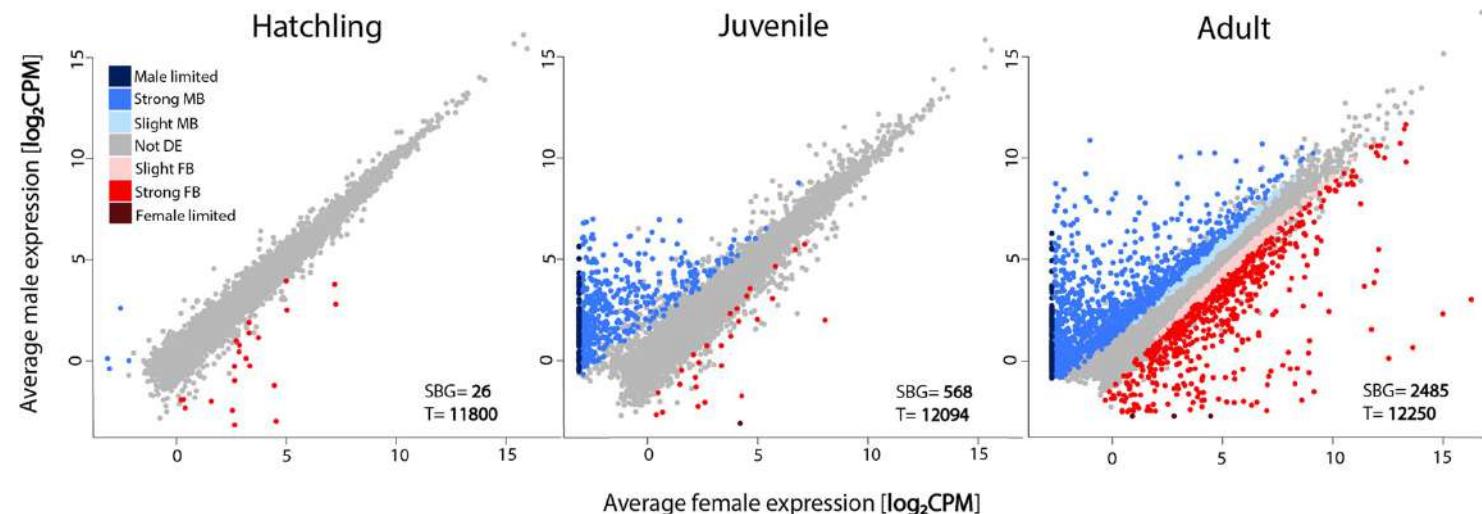

# Sex-biased gene expression

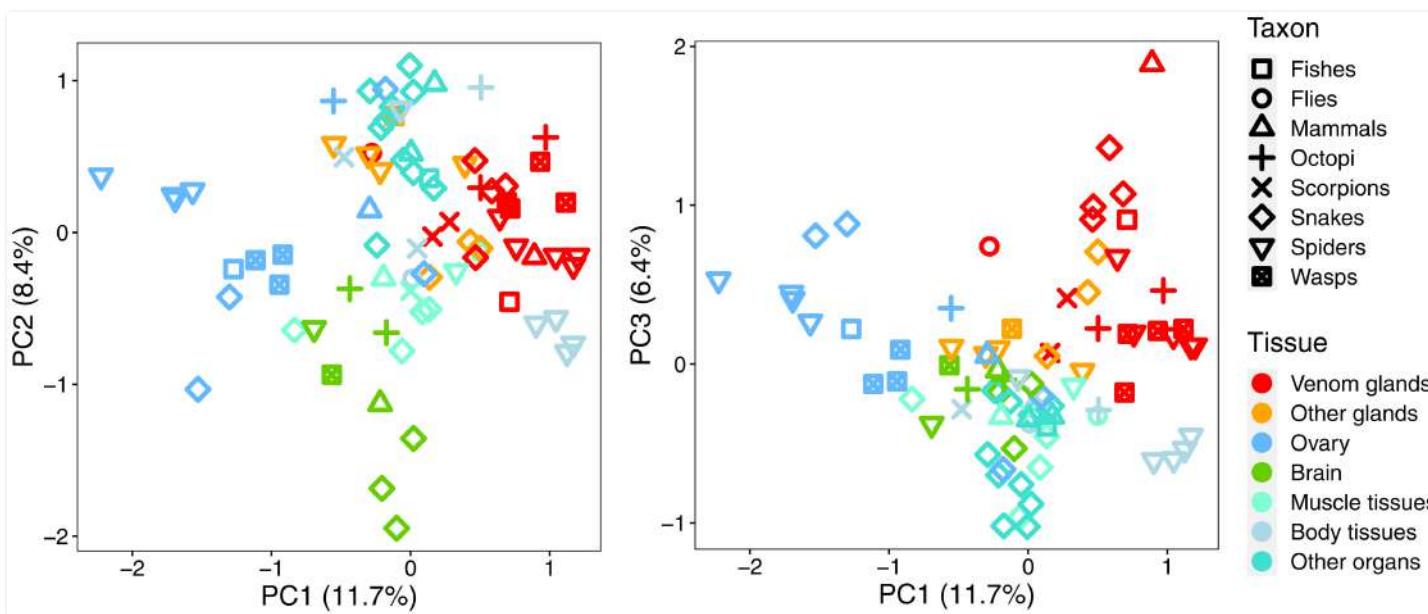

*Drosophila melanogaster*

*Timema californicum*

# Convergent evolution of gene expression in venom glands

---

**Gene expression is  
informative for  
organismal evolution**

---

---

# "Ortholog conjecture"

---

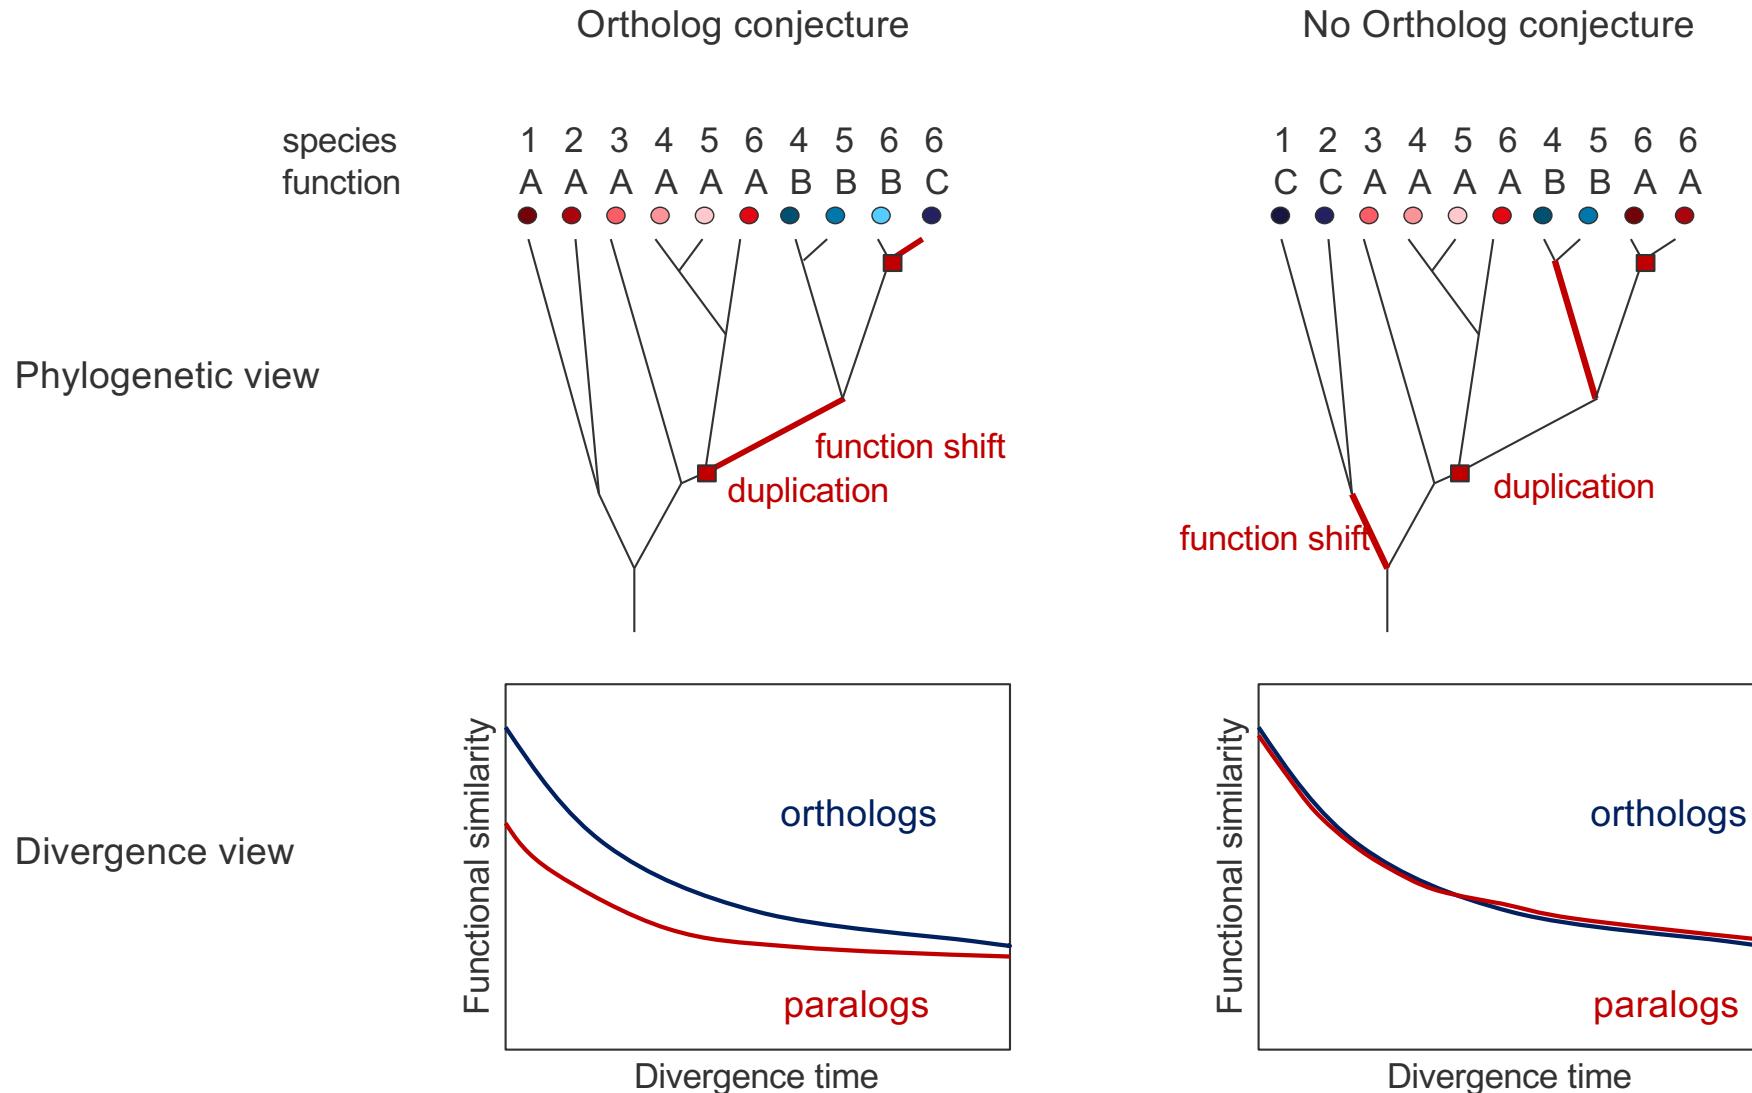

# Poll

---

To transfer annotations to a non model organism, you trust most:

1. protein domains
2. orthologous genes
3. genes with a Blast hit

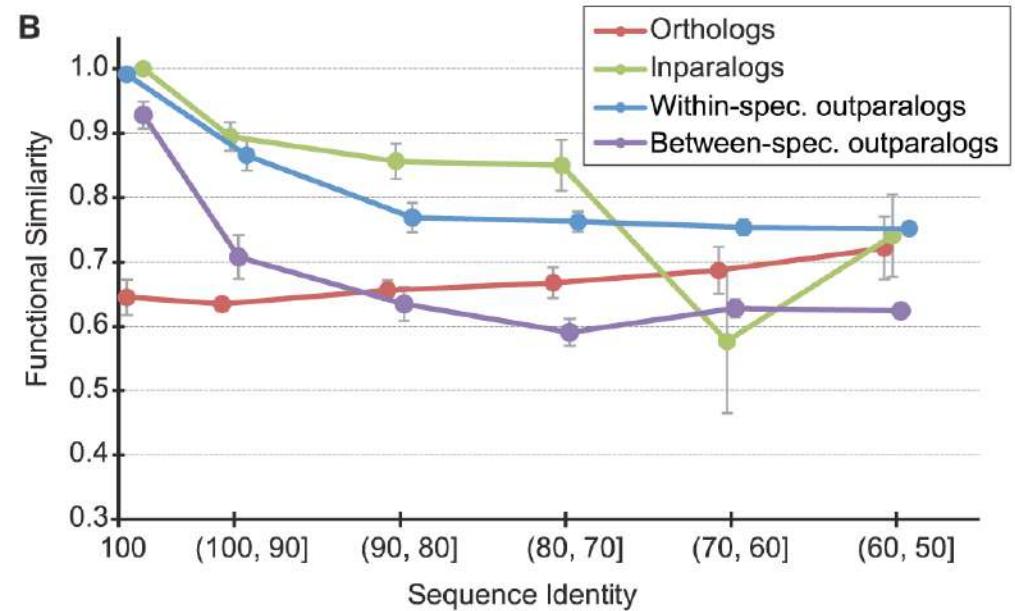

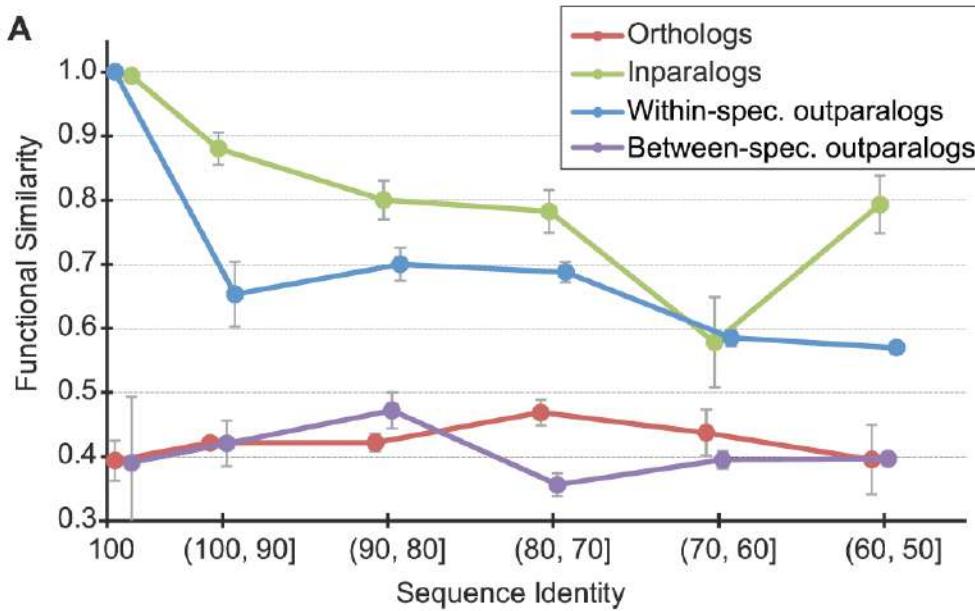

# Orthology and function

# GO similarity of orthologs and paralogs: Surprise!

Human-mouse

(A) Biological Process ontology, (B) Molecular Function ontology

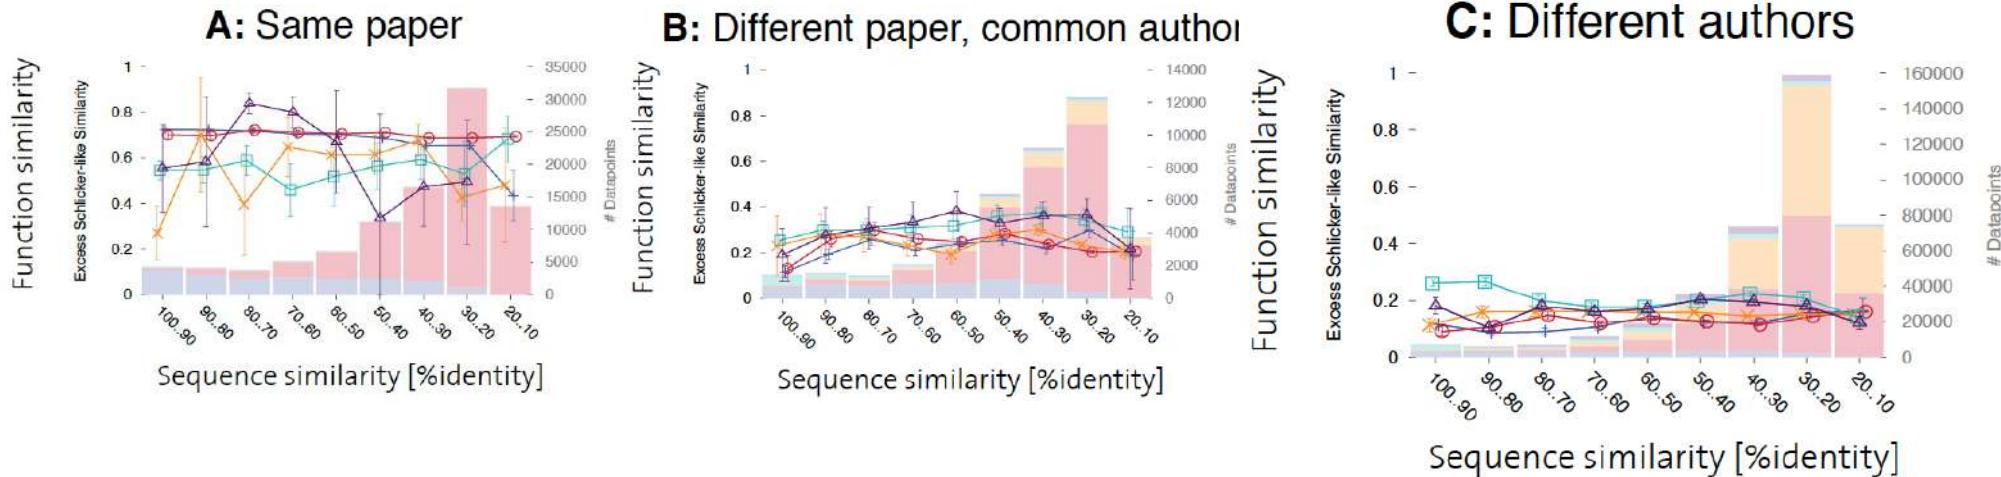

# GO similarity of orthologs and paralogs: Bias...

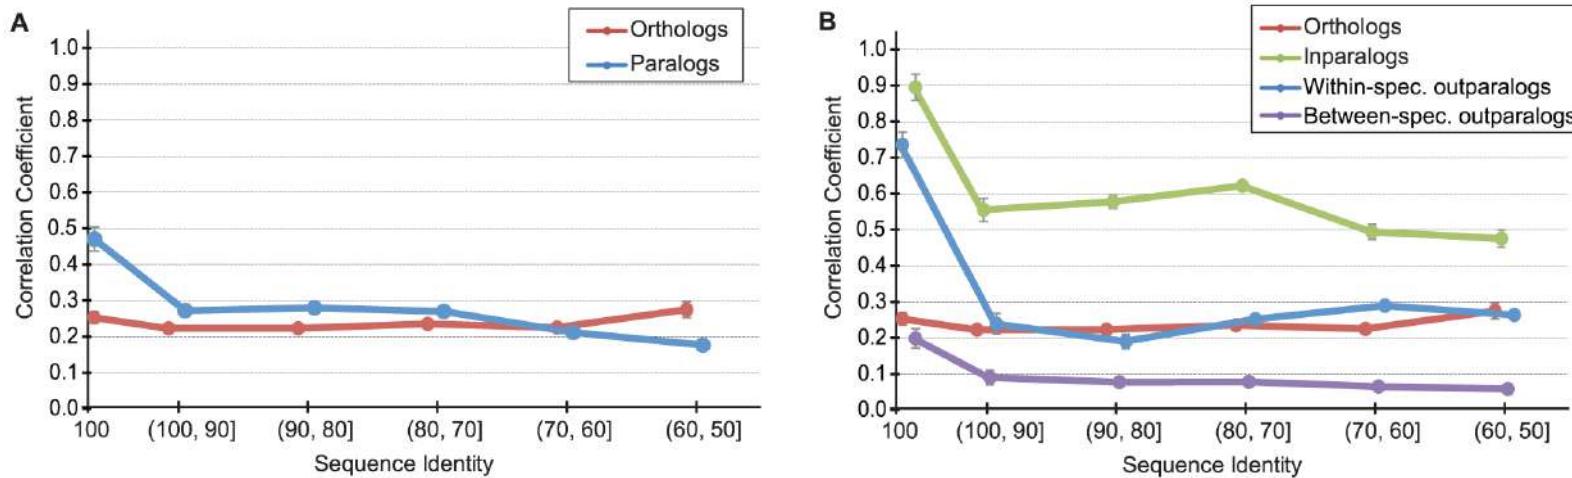

Dataset	Same-Species Paralogs	Different-Species Paralogs	1:1 Orthologs	Other Orthologs
Same Publications	1573	18	154	44
Different Publications, Same Authors	613	382	874	434
No Common Author	2492	20719	13149	11296
All Experimental Annotations	3312	20766	13309	11371

47%

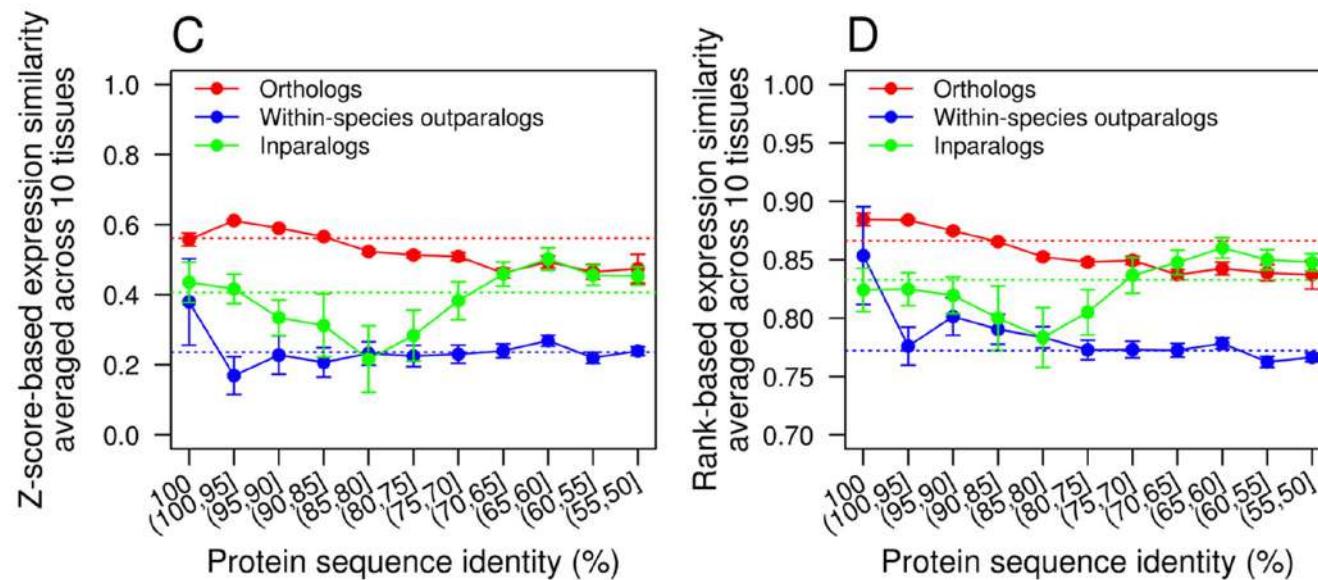

1%

# Expression similarity of orthologs and paralogs

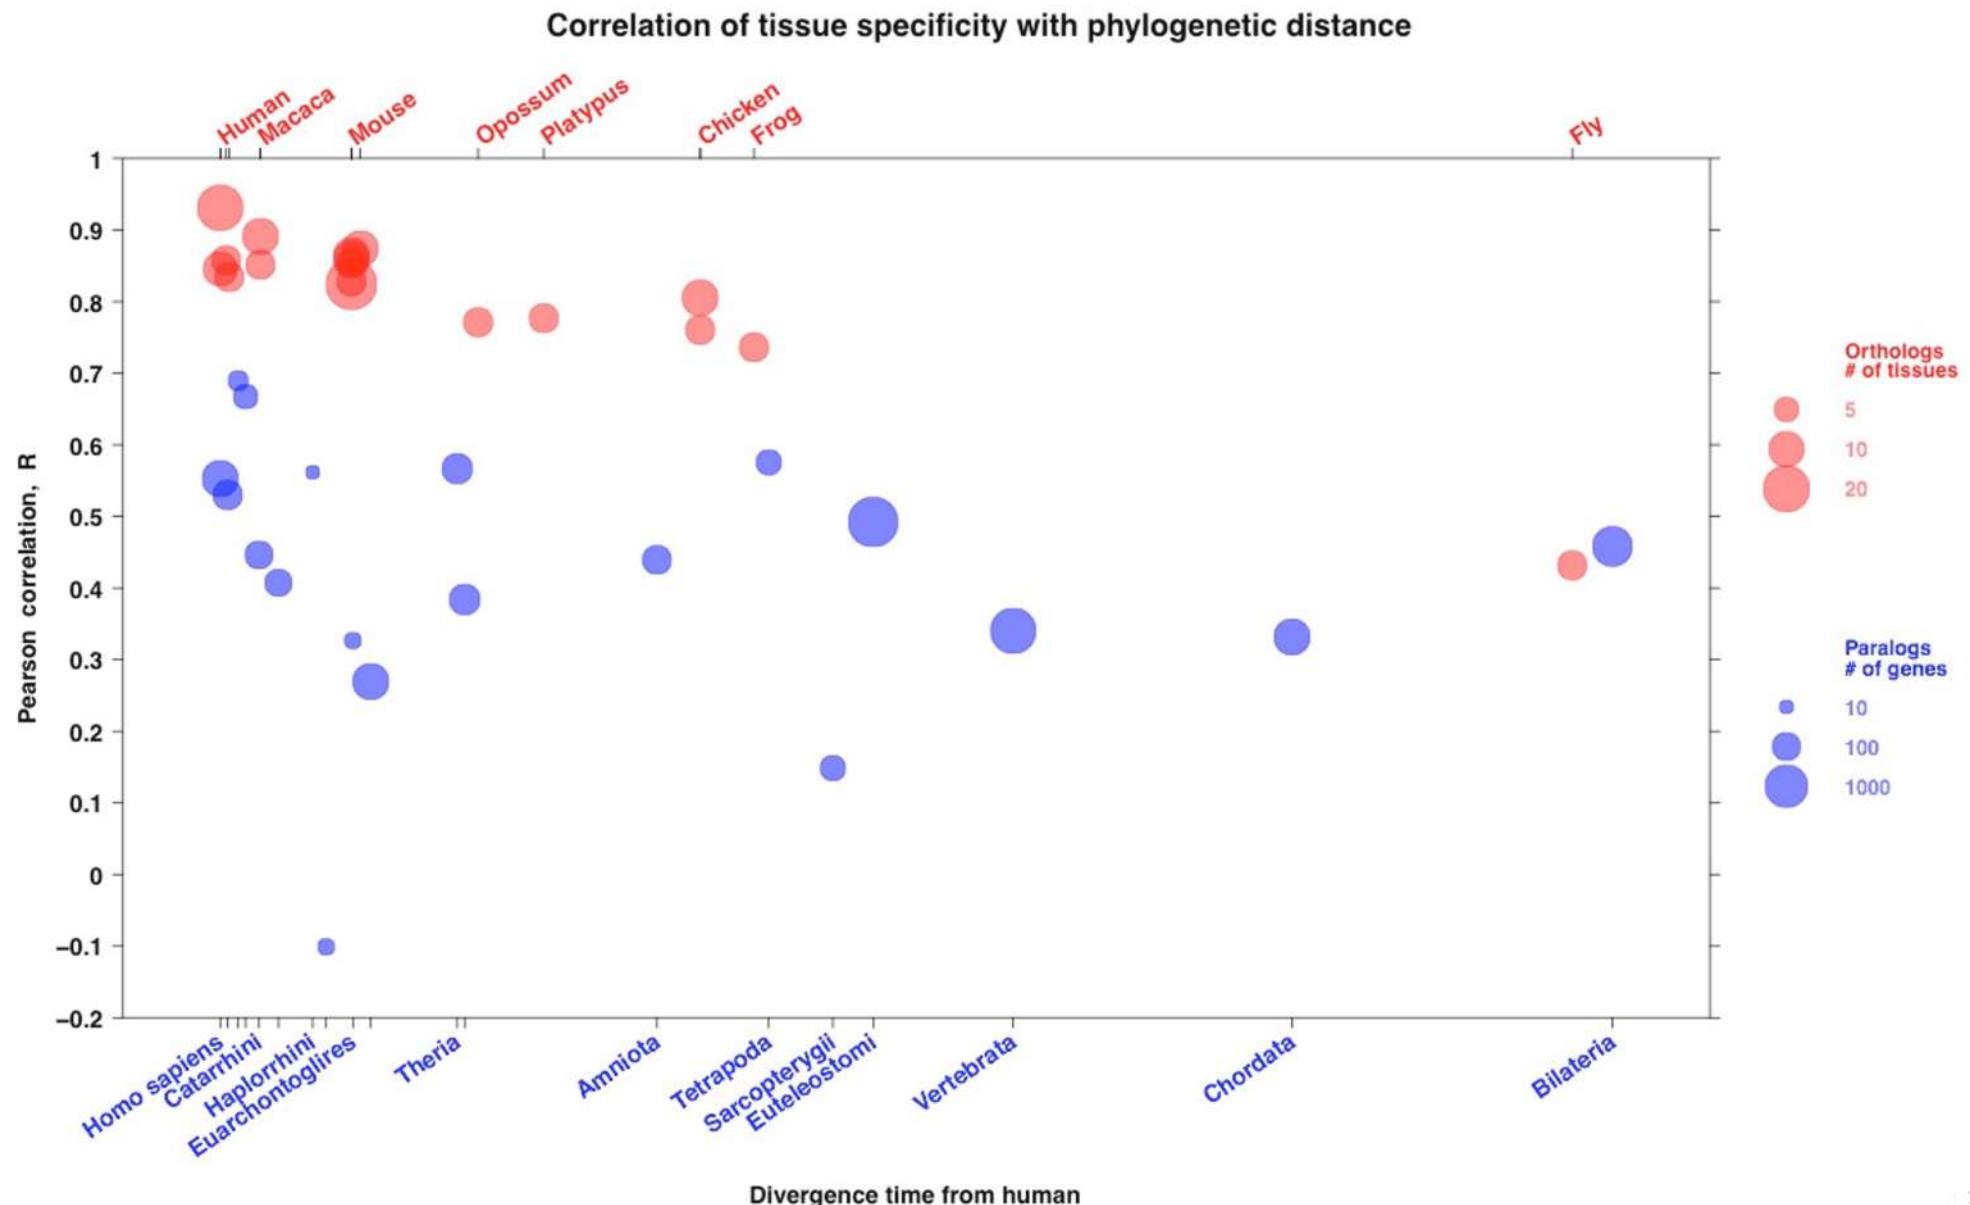

Nehrt et al <https://doi.org/10.1371/journal.pcbi.1002073>

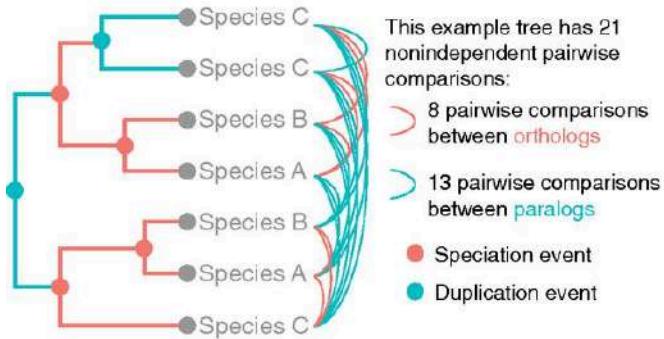

Chen & Zhang 2012 <https://doi.org/10.1371/journal.pcbi.1002784>

# Pairwise correlation of tissue-specificity of expression of orthologs and paralogs

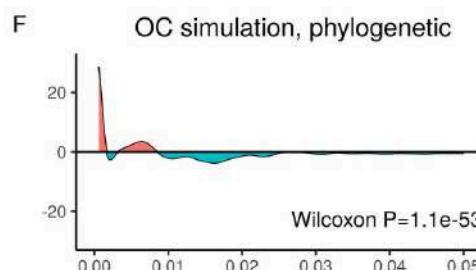

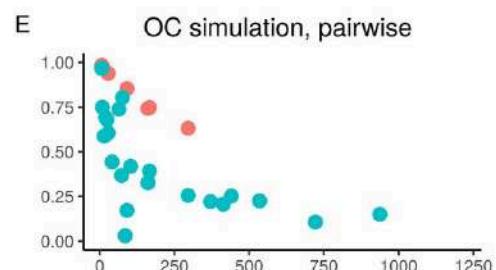

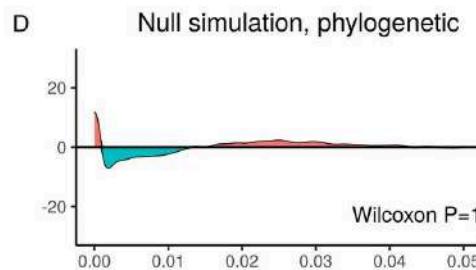

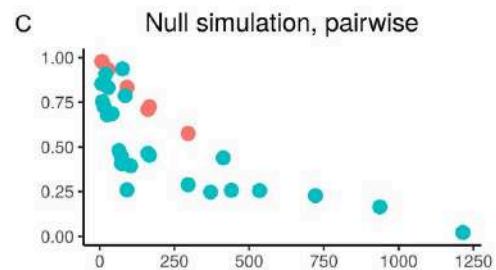

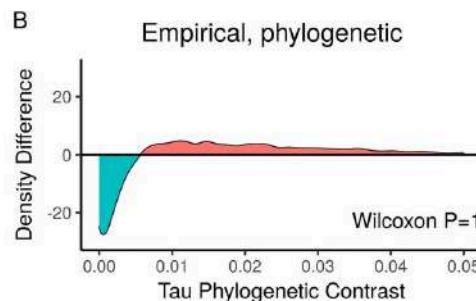

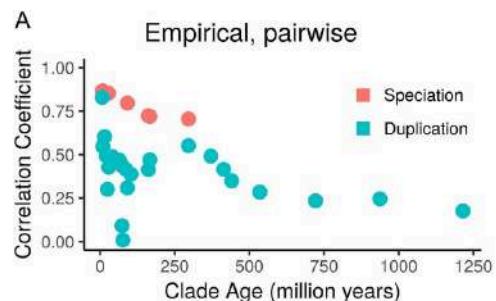

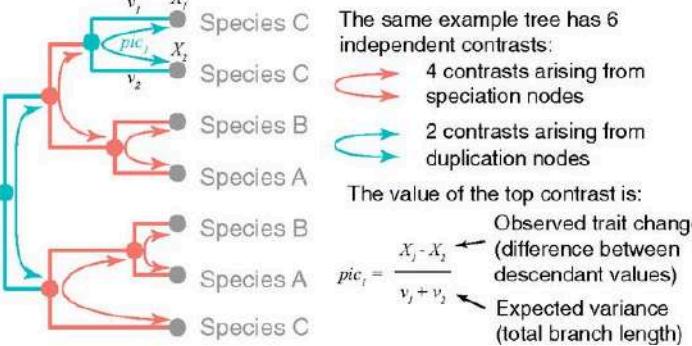

# Phylogenetic contrast of tissue-specificity of expression of orthologs and paralogs (1)

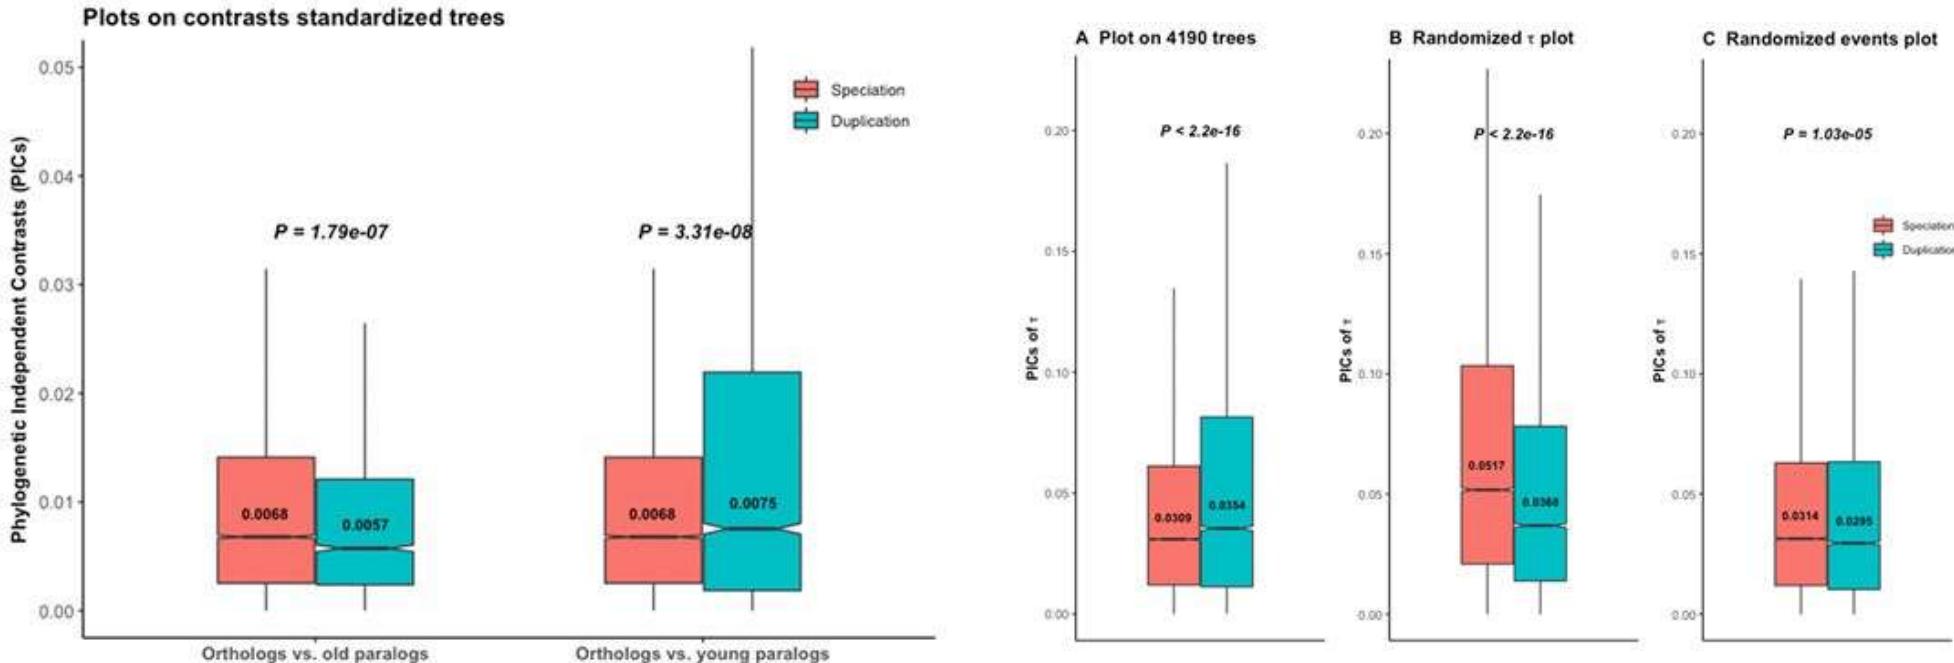

## A Pairwise comparisons

## B Phylogenetic independent contrasts

# Phylogenetic contrast of tissue-specificity of expression of orthologs and paralogs (2)

restricted to trees passing diagnostic tests for phylogenetic independence

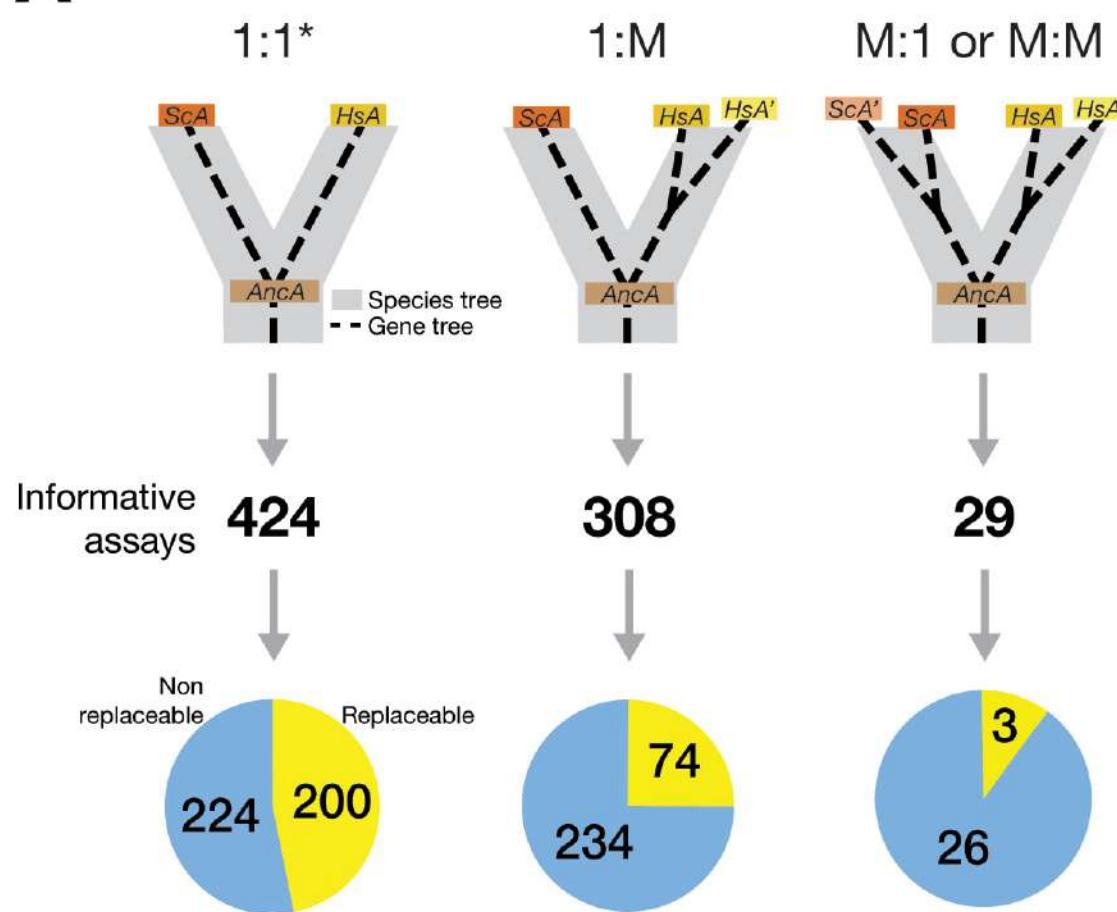

after branch length standardization

randomized trees have similar results to the first phylogenetic tests (and to old paralogs in trees passing diagnostic tests)

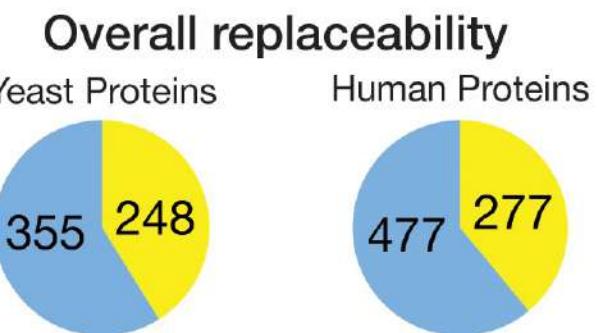

# Humanization of yeast genes: functional divergence between paralogs

A

Orthology class

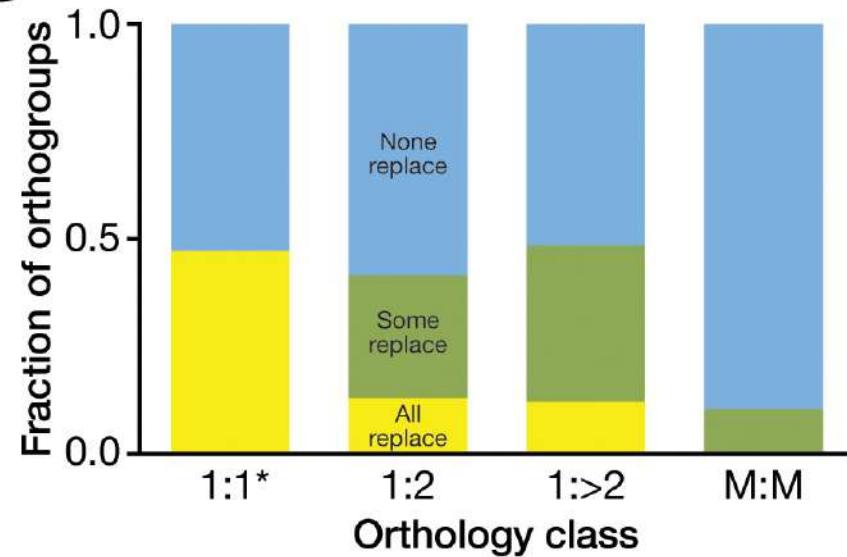

B

C

Detailed results by class

# Phylogenomics of function is hard

---

Evidence gene A	Evidence gene A'	Apparent conclusion	Relevance
Experiment X: function x	Homology transfer: function x	Conserved function	No: circular reasoning
Experiment X: function x	Experiment Y: function y	Different function	No: experiments cannot be compared
Experiment X: function x	Experiment X: function x	Conserved function	Yes: evolutionary conservation
Experiment X: function x	Experiment X: function x'	Different function	Yes: evolutionary change

# Poll

---

Do you believe the ortholog conjecture?

---

# Gene list enrichment

---

## Discussion

---

One scenario where you need the function of a list of genes

# General principle of gene list enrichment

---

Biologically relevant terms = GO terms

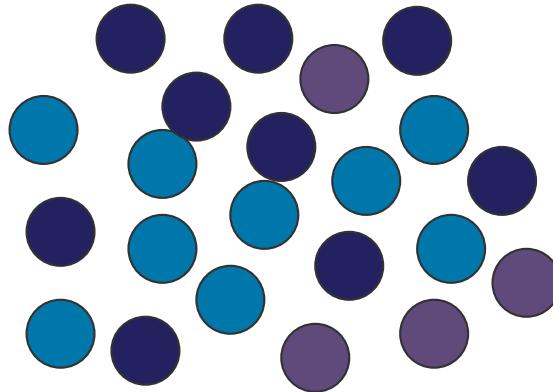

List of interesting genes

Associations gene – term = GO annotations

Are the genes in the list more associated to certain GO terms than expected by chance?

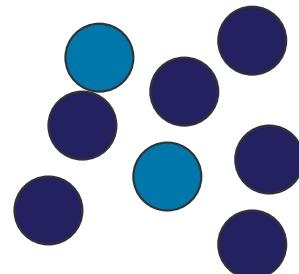

# Over-representation test

Reference  
gene list

Genes annotated with a given GO term  
Genes **not** annotated with a given GO term

Your **gene list**  
of interest

Is the given annotation class over- or  
under- represented compared to a  
reference?

# Over (under) representation test example

	Contingency Table			P-value
count genes with GO term in set	51	416	467	
count genes without GO term in set	125	8588	8713	$8 \times 10^{-52}$
count in set (e.g. differentially expressed genes)	173	9004	9177	
Count in reference set (e.g. all genes on array)				Fisher's exact test or chi-square test or binomial or hypergeometric

Displaying only results with P<0.05; [click here to display all results](#)
